Programming with Logic and Neural Networks

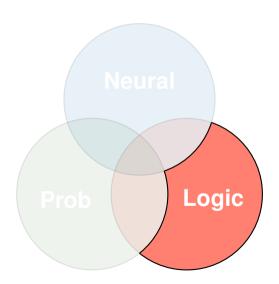

Renato Lui Geh, Jonas Gonçalves, Igor Cataneo Silveira, Denis Deratani Mauá, Fabio Gagliardi Cozman, Yuka Machino

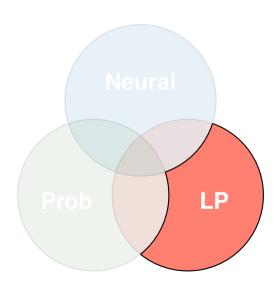

Horn Logic

Alfred Horn (1918 - 2001)

A rule is...

$$(\neg b_1 \lor \neg b_2 \lor \dots \lor \neg b_n) \lor (h_1 \lor h_2 \lor \dots \lor h_m)$$

$$\equiv$$

$$\underbrace{h_1 \lor h_2 \lor \dots \lor h_m}_{\text{Head}} \leftarrow \underbrace{b_1 \land b_2 \land \dots \land b_n}_{\text{Body}}.$$

Intuition: *if* $b_1 \wedge \cdots \wedge b_n$, *then* one of h_1, \cdots, h_m must hold.

Horn Logic

Alfred Horn (1918 - 2001)

A fact is...

Intuition: h_1, \dots, h_m are *always* true.

Horn Logic

Alfred Horn (1918 - 2001)

An integrity constraint is...

$$(\neg b_1 \lor \neg b_2 \lor \cdots \lor \neg b_n) \lor \bot$$

$$\equiv$$

$$\bot_{\text{Head}} \leftarrow \underbrace{b_1 \land b_2 \land \cdots \land b_n}_{\text{Body}}.$$

Intuition: $b_1 \wedge \cdots \wedge b_n$ *cannot* be true.

Answer Set Programming

[Gebser et al., 2019]

```
% Solving Towers of Hanoi with ASP.
\{ move(D, P, T) : disk(D), peg(P) \} = 1 :- moves(M), T = 1...M.
move(D,T) :- move(D,...T).
on(D,P,0) :- init_on(D,P).
on(D,P,T) :- move(D,P,T).
on(D,P,T+1) := on(D,P,T), not move(D,T+1),
                          not moves(T).
blocked(D-1,P,T+1) :- on(D,P,T), not moves(T).
blocked(D-1,P,T) :- blocked(D,P,T), disk(D).
:- move(D,P,T), blocked(D-1.P.T).
:- move(D,T), on(D,P,T-1), blocked(D,P,T).
:- goal_on(D.P), not on(D.P.M), moves(M).
:- \{ on(D,P,T) \} != 1, disk(D), moves(M), T = 1..M.
```

Rule

 $Umbrella \lor Raincoat \leftarrow Raining \land GoingOutside$

 $umbrella; \ raincoat :- \ raining, \ going_outside.$

Rule

 $Umbrella \lor Raincoat \leftarrow Raining \land GoingOutside$

umbrella; raincoat :- raining, going_outside.

Rule w/ vars

$$\forall x (\text{Duck}(x) \leftarrow \text{Quacks}(x) \land \text{Flies}(x) \land \text{Swims}(x))$$

duck(X) := quacks(X), flies(X), swims(X).

Rule

 $Umbrella \lor Raincoat \leftarrow Raining \land GoingOutside$

umbrella; raincoat :- raining, going_outside.

Rule w/ vars

$$\forall x (\text{Duck}(x) \leftarrow \text{Quacks}(x) \land \text{Flies}(x) \land \text{Swims}(x))$$

duck(X) := quacks(X), flies(X), swims(X).

Fact

$$Day(Monday) \leftarrow \top$$

day(monday).

Rule

Umbrella \vee Raincoat \leftarrow Raining \wedge GoingOutside

umbrella; raincoat :- raining, going_outside.

Rule w/ vars

$$\forall x (\text{Duck}(x) \leftarrow \text{Quacks}(x) \land \text{Flies}(x) \land \text{Swims}(x))$$

duck(X) := quacks(X), flies(X), swims(X).

Fact

$$Day(Monday) \leftarrow \top$$

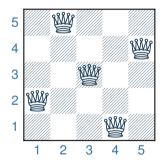

day(monday).

Integrity constraint

$$\forall x(\bot \leftarrow \text{Penguin}(x), \text{Flies}(x))$$

Answer Set Programming – Example

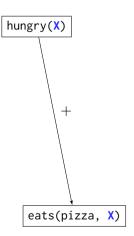

The *n*-queen problem in ASP

```
% Generate at most one queen row-wise.
{queen(I, 1..n)} = 1 :- I = 1..n.
% Generate at most one queen column-wise.
{queen(1..n, J)} = 1 :- J = 1..n.
% Constrain diagonal attacks.
:- {queen(D-J, J)} > 1, D = 2..2*n.
:- {queen(D+J, J)} > 1, D = 1-n..n-1.
```

Answer Set Programming – Stable Model Semantics

```
% If we are hungry, we eat pizza.
eats(pizza, X) :- hungry(X).
% Bruna is hungry.
hungry(bruna).
---
Answer: 1
hungry(bruna) eats(pizza,bruna)
```

Answer Set Programming – Stable Model Semantics

```
hungry(X)
% If we are hungry, either we have burgers...
eats(burger, X) :- hungry(X), not eats(pizza, X).
% ...or pizza.
eats(pizza, X) :- hungry(X), not eats(burger, X).
% Bruna is hungry.
                                                                    +
hungry(bruna).
                                                eats(burger, X)
Answer: 1
hungry(bruna) eats(pizza,bruna)
Answer: 2
hungry(bruna) eats(burger,bruna)
                                                               eats(pizza, X)
```

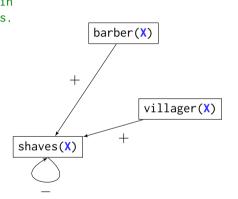

Answer Set Programming – Stable Model Semantics

```
% This barber shaves all those who live in
                                                       barber(X)
% the village yet do not shave themselves.
shaves(X, Y) :- barber(X), villager(Y),
                not shaves(Y, Y).
                                                   +
% John is a barber...
barber(john).
                                                               villager(X)
% ... who lives in the village.
villager(john).
                                            shaves(X)
% Carl lives in the village.
villager(carl).
UNSATISFIABLE
```

Answer Set Programming – Least-undefined Stable Semantics

```
% This barber shaves all those who live in
% the village yet do not shave themselves.
shaves(X, Y) :- barber(X), villager(Y),
                not shaves(Y, Y).
% John is a barber...
barber(john).
% ... who lives in the village.
villager(john).
% Carl lives in the village.
villager(carl).
Answer: 1
barber(iohn) villager(iohn)
villager(carl) shaves(iohn. carl)
```

undef shaves(iohn, iohn)

```
% If house is messy. I do my chores.
do(chores) :- house(messy).
% Procrastinate if stressed and not doing chores.
do(procrastinate) :- stressed, not do(chores).
% Study if not procrastinating or doing chores.
do(study) :- not do(procrastinate), not do(chores).
% Oversleep if procrastinated.
overslept :- do(procrastinate).
% I'm late if I overslept or the bus is late.
late :- overslept.
late :- bus late.
% I'll do the exam if I'm not late.
do(exam) :- not late.
% I'll pass if I study and do the exam.
pass :- do(study), do(exam).
```

```
% If house is messy. I do my chores.
do(chores) :- house(messy).
% Procrastinate if stressed and not doing chores.
do(procrastinate) :- stressed, not do(chores).
% Study if not procrastinating or doing chores.
do(study) :- not do(procrastinate), not do(chores).
% Oversleep if procrastinated.
overslept :- do(procrastinate).
% I'm late if I overslept or the bus is late.
late :- overslept.
late :- bus late.
% I'll do the exam if I'm not late.
do(exam) :- not late.
% I'll pass if I study and do the exam.
pass :- do(study), do(exam).
```

Given that...

- house(messy)
- ▶ ¬stressed

...we have that

Answer:

house(messy) do(chores) do(exam)

```
% If house is messy. I do my chores.
do(chores) :- house(messy).
% Procrastinate if stressed and not doing chores.
do(procrastinate) :- stressed, not do(chores).
% Study if not procrastinating or doing chores.
do(study) :- not do(procrastinate), not do(chores).
% Oversleep if procrastinated.
overslept :- do(procrastinate).
% I'm late if I overslept or the bus is late.
late :- overslept.
late :- bus late.
% I'll do the exam if I'm not late.
do(exam) :- not late.
% I'll pass if I study and do the exam.
pass :- do(study), do(exam).
```

Given that...

- ▶ ¬house(messy)
- stressed

...we have that

Answer:

do(procrastinate) stressed
overslept late

```
% If house is messy. I do my chores.
do(chores) :- house(messy).
% Procrastinate if stressed and not doing chores.
do(procrastinate) :- stressed, not do(chores).
% Study if not procrastinating or doing chores.
do(study) :- not do(procrastinate), not do(chores).
% Oversleep if procrastinated.
overslept :- do(procrastinate).
% I'm late if I overslept or the bus is late.
late :- overslept.
late :- bus late.
% I'll do the exam if I'm not late.
do(exam) :- not late.
% I'll pass if I study and do the exam.
pass :- do(study), do(exam).
```

Given that...

- ► house(messy)
- stressed

...we have that

Answer:

house(messy) do(chores)
do(exam) stressed

```
Do I always tidy up when messy?
% If house is messy, I do my chores.
do(chores) :- house(messy).
% Procrastinate if stressed and not doing chores.
do(procrastinate) :- stressed, not do(chores).
% Study if not procrastinating or doing chores.
do(study) :- not do(procrastinate), not do(chores).
% Oversleep if procrastinated.
overslept :- do(procrastinate).
% I'm late if I overslept or the bus is late.
late :- overslept.
late :- bus_late.
% I'll do the exam if I'm not late.
do(exam) :- not late.
% I'll pass if I study and do the exam.
pass :- do(study), do(exam).
```

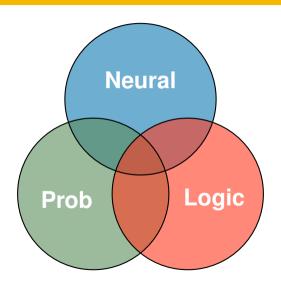

```
Do I always tidy up when messy?
% If house is messy, I do my chores.
do(chores) :- house(messy).
% Procrastinate if stressed and not doing chores.
do(procrastinate) :- stressed, not do(chores).
% Study if not procrastinating or doing chores.
do(study) :- not do(procrastinate), not do(chores).
% Oversleep if procrastinated.
                                                   Do I always procrastinate when stressed?
overslept :- do(procrastinate).
% I'm late if I overslept or the bus is late.
late :- overslept.
late :- bus_late.
% I'll do the exam if I'm not late.
do(exam) :- not late.
% I'll pass if I study and do the exam.
pass :- do(study), do(exam).
```

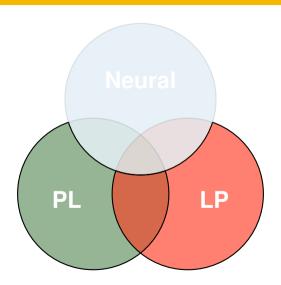

```
Do I always tidy up when messy?
% If house is messy, I do my chores.
do(chores) :- house(messy).
% Procrastinate if stressed and not doing chores.
do(procrastinate) :- stressed, not do(chores).
% Study if not procrastinating or doing chores.
do(study) :- not do(procrastinate), not do(chores).
% Oversleep if procrastinated.
                                                   Do I always procrastinate when stressed?
overslept :- do(procrastinate).
% I'm late if I overslept or the bus is late.
late :- overslept.
                                                            How often is the bus late?
late :- bus_late.
% I'll do the exam if I'm not late.
do(exam) :- not late.
% I'll pass if I study and do the exam.
pass :- do(study), do(exam).
```

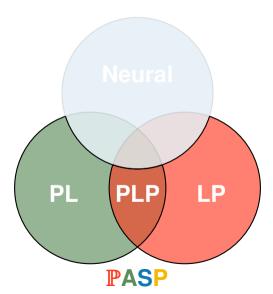

```
Do I always tidy up when messy?
% If house is messy, I do my chores.
do(chores) :- house(messy).
% Procrastinate if stressed and not doing chores.
do(procrastinate) :- stressed, not do(chores).
% Study if not procrastinating or doing chores.
do(study) :- not do(procrastinate), not do(chores).
% Oversleep if procrastinated.
                                                    Do I always procrastinate when stressed?
overslept :- do(procrastinate).
% I'm late if I overslept or the bus is late.
late :- overslept.
                                                            How often is the bus late?
late :- bus_late.
% I'll do the exam if I'm not late.

hungry(bruna) eats(burger,bruna)
Probability: 0.7
```

What is $\mathbb{P}(\text{eats(pizza,bruna)})$?

$$\mathbb{P}(q) = \sum_{\theta \in \Theta} \mathbb{P}(\theta) \cdot \llbracket I_{\theta} \models q \rrbracket$$
$$= 0.3 \times 0 + 0.7 \times 1 + 0.7 \times 1 = 1.4 ???$$

Given probabilistic components...

$$0.25::a.\ 0.70::b.\ 0.40::c.$$

A total choice $\theta \in \Theta$ is...

$$\Theta = \{ \{a, b, c\}, \{a, b, \mathsf{not}\ c\}, \dots, \{\mathsf{not}\ a, \mathsf{not}\ b, \mathsf{not}\ c\} \}.$$

If
$$\theta = \{a, \text{not } b, c\}$$
, then...

$$\mathbb{P}(\theta) = \mathbb{P}(a) \cdot \mathbb{P}(\mathsf{not}\ b) \cdot \mathbb{P}(c) = 0.75 \times 0.3 \times 0.6 = 0.135.$$

$$\mathbb{P}(q) = \sum_{\theta \in \Theta} \mathbb{P}(\theta) \cdot \llbracket I_{\theta} \models q
rbracket$$

Given probabilistic components...

 $0.25::a.\ 0.70::b.\ 0.40::c.$

A total choice $\theta \in \Theta$ is...

$$\Theta = \{ \{a, b, c\}, \{a, b, \mathsf{not}\ c\}, \dots, \{\mathsf{not}\ a, \mathsf{not}\ b, \mathsf{not}\ c\} \}.$$

If $\theta = \{a, \text{not } b, c\}$, then...

$$\mathbb{P}(\theta) = \mathbb{P}(a) \cdot \mathbb{P}(\mathsf{not}\ b) \cdot \mathbb{P}(c) = 0.75 \times 0.3 \times 0.6 = 0.135.$$

$$\mathbb{P}(q) = \sum_{ heta \in \Theta} \mathbb{P}(heta) \cdot rac{N(I_{ heta} \models q)}{N(heta)}$$

Given probabilistic components...

 $0.25::a.\ 0.70::b.\ 0.40::c.$

A total choice $\theta \in \Theta$ is...

$$\Theta = \{ \{a, b, c\}, \{a, b, \mathsf{not}\ c\}, \dots, \{\mathsf{not}\ a, \mathsf{not}\ b, \mathsf{not}\ c\} \}.$$

If
$$\theta = \{a, \text{not } b, c\}$$
, then...

$$\mathbb{P}(\theta) = \mathbb{P}(a) \cdot \mathbb{P}(\mathsf{not}\ b) \cdot \mathbb{P}(c) = 0.75 \times 0.3 \times 0.6 = 0.135.$$

$$\mathbb{P}(q) = \sum_{\theta \in \Theta} \mathbb{P}(\theta) \cdot \underbrace{\frac{N(I_{\theta} \models q)}{N(\theta)}}_{\text{\# of models where } \theta \text{ is true}}$$

Given probabilistic components...

 $0.25::a.\ 0.70::b.\ 0.40::c.$

A total choice $\theta \in \Theta$ is...

$$\Theta = \{\{a, b, c\}, \{a, b, \text{not } c\}, \dots, \{\text{not } a, \text{not } b, \text{not } c\}\}.$$

If
$$\theta = \{a, \text{not } b, c\}$$
, then...

$$\mathbb{P}(\theta) = \mathbb{P}(a) \cdot \mathbb{P}(\mathsf{not}\ b) \cdot \mathbb{P}(c) = 0.75 \times 0.3 \times 0.6 = 0.135.$$

The probability of query q is...

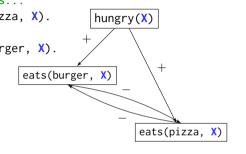

of models where θ is true and q is consistent

$$\mathbb{P}(q) = \sum_{ heta \in \Theta} \mathbb{P}(heta) \cdot \overbrace{\frac{N(I_{ heta} \models q)}{N(heta)}}$$

Probabilistic Answer Set Programming – Example

```
% If we are hungry, either we have burgers...
eats(burger, X) :- hungry(X), not eats(pizza, X).
% ...or pizza, but not both.
eats(pizza, X) :- hungry(X), not eats(burger, X).
% Bruna is hungry 70% of the time.
0.7::hungry(bruna).
Answer: 1
Probability: 0.3
Answer: 2
hungry(bruna) eats(pizza,bruna)
Probability: 0.7
Answer: 3
hungry(bruna) eats(burger,bruna)
```

Probability: 0.7

What is $\mathbb{P}(\text{eats(pizza,bruna)})$?

$$\mathbb{P}(q) = \sum_{\theta \in \Theta} \mathbb{P}(\theta) \cdot \frac{N(I_{\theta} \models q)}{N(\theta)}$$
$$= 0.3 \times \frac{0}{1} + 0.7 \times \frac{1}{2} + 0.7 \times \frac{0}{2} = 0.35$$

How much faster is dPASP on the MNIST Add?

Experiments

How much faster is dPASP on the MNIST Add?

Challenges in $d \mathbb{P}ASP$

The woes of exact inference:

$$\mathbb{P}(q) = \sum_{\theta \in \Theta} \mathbb{P}(\theta) \cdot \frac{N(I_{\theta} \models q)}{N(\theta)}$$

Challenges in *d* PASP

The woes of exact inference:

$$\mathbb{P}(q) = \sum_{\substack{\theta \in \Theta \ ext{Exponential!}}} \mathbb{P}(\theta) \cdot rac{N(I_{ heta} \models q)}{N(heta)}$$

Challenges in *d* PASP

The woes of exact inference:

$$\mathbb{P}(q) = \sum_{\substack{\theta \in \Theta \ ext{Exponential!}}} \mathbb{P}(\theta) \cdot \frac{\overbrace{N(I_{ heta} \models q)}^{ ext{ ext{#P-complete!}}}}{N(heta)}$$

Challenges in $d \mathbb{P}ASP$

The woes of exact inference:

$$\mathbb{P}(q) = \sum_{ heta \in \Theta} \mathbb{P}(heta) \cdot \dfrac{N(I_{ heta} \models q)}{N(heta)}$$
Exponential!

Approximate inference by optimality:

$$\mathbb{P}(q) = \sum_{\theta \in \Theta^*} \mathbb{P}(\theta) \cdot \frac{\overbrace{N^*(I_\theta \models q)}^{\text{Linear!}}}{N^*(\theta)}$$

Challenges in d PASP

The woes of exact inference:

$$\mathbb{P}(q) = \sum_{\substack{\theta \in \Theta \ ext{Exponential!}}} \mathbb{P}(\theta) \cdot \frac{\overbrace{N(I_{ heta} \models q)}^{ ext{\#P-complete!}}}{N(\theta)}$$

Approximate inference by optimality:

$$\mathbb{P}(q) = \sum_{\theta \in \Theta^*} \mathbb{P}(\theta) \cdot \frac{\overbrace{N^*(I_\theta \models q)}^{\text{Linear!}}}{N^*(\theta)}$$

But biased towards high prob models!

Challenges in $d \mathbb{P}ASP$

The woes of exact inference:

$$\mathbb{P}(q) = \sum_{\theta \in \Theta} \mathbb{P}(\theta) \cdot \frac{\stackrel{\# ext{P-complete}!}{N(I_{ heta} \models q)}}{N(\theta)}$$
Exponential!

Approximate inference by sampling (the θ 's):

$$\mathbb{P}(q) = \sum_{\substack{\theta \in \Theta' \\ \text{Linear!}}} \mathbb{P}(\theta) \cdot \frac{\overbrace{N(I_{\theta} \models q)}^{\text{Still \#P-complete!}}}{N(\theta)}$$

Challenges in d PASP

The woes of exact inference:

$$\mathbb{P}(q) = \sum_{ heta \in \Theta} \mathbb{P}(heta) \cdot \dfrac{N(I_{ heta} \models q)}{N(heta)}$$
Exponential!

Approximate inference by sampling (the θ 's):

$$\mathbb{P}(q) = \sum_{\substack{\theta \in \Theta' \\ \text{Linear!}}} \mathbb{P}(\theta) \cdot \frac{\overbrace{N(I_{\theta} \models q)}^{\text{Still \#P-complete!}}}{N(\theta)}$$

No guarantees on approximation!

Challenges in $d \mathbb{P}ASP$

The woes of exact inference:

$$\mathbb{P}(q) = \sum_{\theta \in \Theta} \mathbb{P}(\theta) \cdot \frac{\stackrel{ ext{ witherpooned M}}{N(I_{ heta} \models q)}}{N(\theta)}$$
Exponential!

Inference by compilation:

$$\mathbb{P}(q) = \sum_{\substack{\theta \in \Theta \ ext{Linear!}}} \mathbb{P}(heta) \cdot \frac{\overbrace{N(I_{ heta} \models q)}^{ ext{Linear!}}}{N(heta)}$$

Challenges in d PASP

The woes of exact inference:

$$\mathbb{P}(q) = \sum_{\theta \in \Theta} \mathbb{P}(\theta) \cdot \frac{\stackrel{\# ext{P-complete!}}{N(I_{ heta} \models q)}}{N(\theta)}$$

Inference by compilation:

$$\mathbb{P}(q) = \sum_{\substack{\theta \in \Theta \\ \text{Linear!}}} \mathbb{P}(\theta) \cdot \frac{\overbrace{N(I_{\theta} \models q)}^{\text{Linear!}}}{N(\theta)}$$

Compiling to probabilistic circuits is hard!

Challenges in $d \mathbb{P}ASP$

The woes of exact inference:

$$\mathbb{P}(q) = \sum_{ heta \in \Theta} \mathbb{P}(heta) \cdot \dfrac{N(I_{ heta} \models q)}{N(heta)}$$
Exponential!

Inference by approximate compilation:

$$\mathbb{P}(q) = \sum_{\substack{ heta \in \Theta \ ext{Linear!}}} \mathbb{P}(heta) \cdot \overbrace{N(I_{ heta} \models q)}^{rac{ ext{Linear!}}{N(\theta)}}$$

Challenges in d PASP

The woes of exact inference:

$$\mathbb{P}(q) = \sum_{ heta \in \Theta} \mathbb{P}(heta) \cdot \dfrac{N(I_{ heta} \models q)}{N(heta)}$$
Exponential!

Inference by approximate compilation:

$$\mathbb{P}(q) = \sum_{\substack{\theta \in \Theta \ \text{Linear!}}} \mathbb{P}(\theta) \cdot \frac{\overbrace{N(I_{\theta} \models q)}^{\text{Linear!}}}{N(\theta)}$$

Compiling to probabilistic circuits is hard $\times 10!$
